

Hot  
Stamping

**Model 301**  
**\$1295.00**

## **Model 301**

You will recognize hot stamped imprints as those elegant gold studio names or logos on the corner of fine photographs. With the Phase II Hot Stamping Units you can make those same imprints as well as imprints on award ribbons, napkins, pencils, flat sided pens, matchbooks, book covers, letterheads, business cards, photographic slide mounts, plastic name badges and virtually any other flat surface.

The hot stamping process begins by setting type with the desired message. Allow the machine to heat to operating temperature, and then position the item to be imprinted and pull the handle. The type or die will melt a foil-coloring agent into the item leaving a crisp permanent mark. Imprint with a wide variety of foil colors.

Optional accessories include special fixtures for holding pencils or pens with flat sides, matchbooks or a general-purpose fixture, which will allow for consistent placement of any item below the type or die. A ninety day limited warranty is included.

## **Model 301 \* The Basic Machine**

The Basic Phase II Hot Stamping Unit has a maximum imprinting area of 3" x 3" with type or up to twenty square inches with a Q.C. Slug. After each imprint, the foil must be pulled from left to right by hand. This unit is ideally suited for small quantity hot stamping jobs. The production speed can be increased by ordering a Manual Power Foil Advance unit. The unit is placed on the right side of the machine and includes a motorized foil take up spool.

After each imprint the operator depresses a switch, drawing the foil unit the switch is released and keeping the foil in line with the type or die.

Use Bucky Brand Hard Type  
or Hard Foundry Type

## **Model 301**

Voltage	110-120-60Hz
Temperature Control	Solid State Analog
Maximum Sustained Temperature	300 F
